# Hybrid 3D

The Hybrid 3D is a simple, plug and play device that allows you to:

- Add a Master Valve and Flow Sensor to any irrigation controller\*<sup>1</sup> using existing wires.
- Add 1-24 new valves\*<sup>2</sup> to your existing system without running new control wires.

Here are some of the comments installers have made about the Hybrid 3D.

*"It just works!"*

*"It's so easy to install. In five minutes it was up and running"*

*"I have so many sites where this device would be useful"*

The Hybrid 3D empowers your water conservation efforts by helping you measure and identify the impact & value of your irrigation system upgrades.

The Hybrid 3D a simple, cost effective solution to a potentially complex and costly problem.

\*<sup>1</sup> Host controller must have Flow Sensor & MV capabilities.

\*<sup>2</sup> Host controller must have available module or terminal connections for control of additional valves.
