SMART IRRIGATION FROM THE GROUND UP
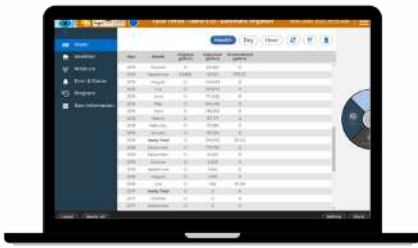

RealNet Platform

RealNet Platform

Bring Smart Irrigation with you, anywhere in the world, with Tucor's RealNet Remote Access Platforms. RealNet's flexible & user-friendly web interfaces bring real-time irrigation data & control to any web-enabled device. From a water manager looking to monitor water usage to a field technician looking to test a valve, RealNet's three integrated platforms provide the right level of irrigation management to all levels of irrigation stakeholders.

One Cohesive Line for Tucor Current & Legacy Controllers:

LTD, RKD, RKD+, RKS, RKS+, TWI

CycleManager+

Tucor's Cycle Manager+ is your all-in-one management platform with the simplicity of access from any browser. Make program & station changes, view real-time flow data, export monitoring & water usage reports, and read & react to alarms on virtually any web-enabled device.

MobileManager

MobileManger contains all the features you need for on-demand troubleshooting and field work. With Tucor's MobileManager, you can view real-time data, manually run stations & programs, and react to controller alarms.

Virtual Controller

Access your controller & navigate the display in real-time, from anywhere in the world with Tucor's unique Virtual Controller platform! With Tucor's Virtual Controller, you can remotely train field technicians, validate CycleManager+ data & access controller-only functions without the inconvenience of having to go to the physical controller.

Features that Matter!

- Real-time sensor & alarm indicators
- Security Sync prevents local or remote information override
- Export irrigation & water usage reports with the touch of a button
- Adjust controller programs & parameters without interrupting ongoing irrigation
- Customizable email and text alerts
- Use with any internet-enabled device
